

#Assigning rules for instance in Security Group :

- ❖ In AWS, a Security Group (SG) acts like a virtual firewall that controls the inbound (incoming) and outbound (outgoing) traffic for your EC2 instances or other AWS resources.
- ❖ the work of a security group is to control network access to your AWS resources, making sure only the right traffic is allowed in and out.

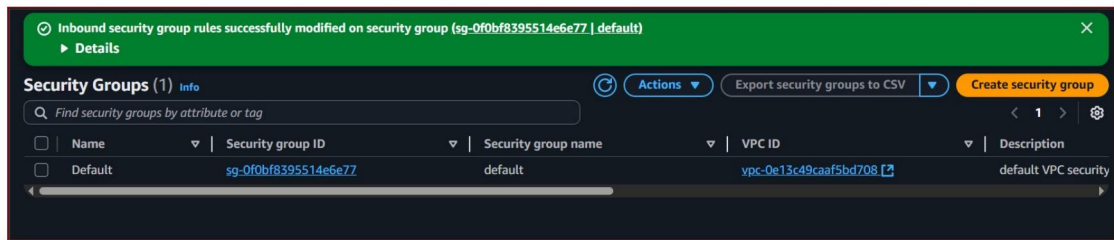

1. Go in security group, Select group & Click on edit inbound rules :

2. Add rules as per requirement & save rules :

3. Created successfully :
